pINDEX1 is a binary vector designed for glucocorticoid-inducible
gene expression in plants and is optimized for use in rice; pINDE
gene expression in plants and is optimized for use in rice; pINDE
is part of a series of four pINDEX vectors (Genbank Accession
Numbers AF294979-AF294982). pINDEX vectors are based on parts of
pCAMBIA-1300 encoded by GenBank Accession Number AF234296 and
pCAMBIA-1300 and T. and Chua N.-H., 1997, plant J. 11:605-612).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          other sequences; artificial sequences; vectors.

The nucleotide sequence of this BAC clone was generated by
combining Monsanto and RGP-Japan sequencing data.
NOTE: It currently consists of 1 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces is believed
to be correct as given, however the sizes of the gaps between them
are based on estimates that have provided by the submitter. This
sequence will be replaced by the finished sequence as soon as it is
available and the accession number will be preserved.
* NOTE: This is a 'working draft' sequence.

* This sequence will be replaced

* by the finished sequence as soon as it is available and
the accession number will be preserved.

* The facession number will be preserved.

* the accession number will be preserved.

BLASTN with the corresponding DBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

This generates of pofessors is from T7 to SP6 of the PAC clone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (http://giobin.cse.psu.edu/htmi/qocs/sim4.ntml/, gap2
(http://www.tigr.org/software/gilmmerm/), BLASTN and BLASTX. The
genomic sequence was searched against NCBI NonRedundant Protein
database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA
sequence database at RGP or DDBJ. Protein homologies of the coding
regions were searched against NCBI NonRedundant Protein database
with BLASTN ESTs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
Full-length cDNAs represent the identified cDNA sequences using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence of P0681F05 clone has an overlap with OSJNBa0007H12 (DDBJ: AP004990) clone at 5' end and with OSJNBb0044C15 (DDBJ: AP005850) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (http://www.tigr.org/tdb/glimmerm/glmr_form.html), Ric (http://rgp.dna.affrc.go.jp/RiceHmm/), SplicePredictor(http://bioinformetics.iastate.edu/cgi-bin/sp.cgi), si (http://bioinformetics.iastate.edu/cgi-bin/sp.cgi), si (http://globin.cse.psu.edu/html/docs/sim4.html), gap2

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This invention relates to a novel isolated regulatory nucleic acid sequence that is useful in the field of plant molecular biology. Specifically, it refers to a regulatory gene of the rice GOS2 gene that can drive expression of an associated nucleic acid sequence in a non-monocotyledonous plant or plant cell. The present invention describes introducing a regulatory sequence that results in constitutive expression (with levels similar to that of CaMV 35S) of an isolated or endogenous

nucleic acid sequence in a transgenic non-monocotyledonous plant. In

Use of a regulatory nucleic acid associated nucleic acid sequence

sequence for driving expression in a non-monocotyledonous plant

of an or plant

GCCTATTTAATACATTTAGGTAGCAATATCT	57.7%; Score 1267; DB 3; Length 9361; imilarity 99.6%; Pred. No. 0;	interrupted of 1010 bp of promoter and 170 bp of untranslated 5' leader iterrupted by a 1100 bp intron sequence squence 9361 BP; 2449 A; 2285 C; 2190 G; 2435 T; 0 U; 2 Other;	ransformation vector pGOS2-hpt, that contains a hygromycin selectable rikker driven by the 355 promoter and a GOS2/GUS/nos cassette (GOS2 anscription initiation region/GUS structural gene/nos 3' untranslated gion). The GOS2 transcription initiation region in this construct is	nnserved sequence elements and structural features. They are about 300- 100 bp in length. Increased levels of expression of DNA introduced into 101 ants can be achieved by use of MAR. They can also reduce the position 11 transgenic organisms. The present DNA sequence is the rice	CC (MAR) or scaffold attachment region, to increase the expression of genes CC introduced in transformed plants. MARs are located in non-transcribed CC regions of genes and form the physical boundaries of individual DNA CC loops. They are rich in adenosine and thymine bases and contain certain	Example 3; Page 48-51; 73pp; English. The patent discloses a DNA molecule, useful as matrix attachment region	An isolated DNA molecule for use as a matrix attachment region to increase expression of genes introduced in transformed plants comprises a 298 base pair sequence described in the specification. ```

T increase expression of genes introduced in transformed plants comprises 298 base pair sequence described in the specification.

Example 3; Page 51-54; 73pp; English.

The patent discloses a DNA molecule, useful as matrix attachment region CC (MAR) or scaffold attachment region, to increase the expression of genes introduced in transformed plants. MARs are located in non-transcribed CC regions of genes and form the physical boundaries of individual DNA CC loops. They are rich in adenosine and thymine bases and contain certain CC conserved sequence elements and structural features. They are about 300-CC 2000 bp in length. Increased levels of expression of DNA introduced into CC plants can be achieved by use of MAR. They can also reduce the position CC plants can be achieved by use of MAR. They can also reduce the position CC except that it contains a MAR dimer-2 positioned 3' to the COS2 CC except that it contains a MAR dimer-2 positioned 5' to the GOS2 CC except that it contains a MAR dimer-2 positioned 3' to the COS2 CC cons 3' UTR (untranslated region). This vector is used to efficiently contains and the mark dimer-1 positioned 3' to the COS2 cons 3' UTR (untranslated region). This vector is used to efficiently contains and the mark dimer-1 positioned 3' to the COS2 cons 3' UTR (untranslated region). This vector is used to efficiently contains and the mark dimer-1 positioned 3' to the COS2 cons 3' UTR (untranslated region). This vector is used to efficiently contains and c

Modifying plant growth and development for altering growth characteristics in plants, comprises introducing a genetic modification in the plant and selecting modulated expression of a nucleic acid encoding a metallothionein protein.

Claim 13; SEQ ID NO 7; 49pp; English

The invention relates to modifying plant growth and development and convolves introducing a genetic modification in the plant and selecting convolves introducing a genetic modification in the plant and selecting convolves introducing a nucleic acid encoding a convolves in protein, provided that the modified growth and convolves in protein, provided that the modified growth and convolves the modified plant growth and development; the modified plant growth and development is increased yield, preferably convolves a type plants. Genetic modification comprises introducing an isolated nucleic acid encoding a metallothionein protein into a plant. The nucleic acid encoding a metallothionein protein into a plant. The nucleic acid encoding a metallothionein protein into a plant. The nucleic acid encoding a metallothionein protein into a plant. The nucleic acid encoding a metallothionein protein into a plant. The nucleic acid encoding a metallothionein is driven by a constitutive promoter, preferably the rice GOS2 promoter. The constitutive promoter, preferably the rice GOS2 promoter. The fragments, and the encoding polynucleotides are useful for modifying the growth characteristics of plants, provided that the modified growth and cervainance or resistance to abiotic stress. They are also useful as a growth regulator. The method is useful for modifying plant growth and development. It is also useful for producing plants with altered growth characteristics, cereased biomass, increased total above ground converse index. The present sequence represents the nucleotide sequence of an PRO0129-CDS1585 -zein and rbcS deltaGA double terminator expression of A. thaliana AtMT2a gene.

EN Improving plant growth characteristics, e.g. increased yield, increased CC growth rate, or modified architecture, comprises increasing expression in CC a plant of a nucleic acid encoding a B-type cyclin dependent kinase (CDK) crotein and/or increasing activity and/or levels in a plant of a B-type CC protein. INDEPENDENT CLAIMS are also included for: plants obtained comprising (i) a B-type CDK grotein. INDEPENDENT CLAIMS are also included for: plants obtained comprising (i) a B-type CDK grotein, or (ii) a nucleic acid comprising (i) a B-type CDK conding a CR mutant, which CDK mutant comprises at least one of the 7 camino acid position changes or at least one of the 8 amino acid position changes or at least one of the 8 amino acid position comprises and comprise control sequences control sequences copionally (iv) a transcription termination sequence; a method for producing transgenic plant having improved growth characteristics, e.g. increased yield, increased growth rate, or modified architecture, which

compilating altrects occurrency and the level by the plant of a tryopic occurrence of the property of the plant (DER) SEQ ID NOS; 2-10) for its homologus derivative, or active fregment, used as a growth register; a screening method for identifying con-matted plant CDRs having enhanced CDR activity relative to corresponding con-matted plant CDRs, but are capable of binding to plant ICRs, mattant of the object of the plant CDRs, but are capable of binding to plant ICRs, mattant bind to CDRs obtained using the methods of (6) and (7), where the matants bind to CDRs betained using the methods of (6) and (7), where the matants bind to CDRs but not o cyclin as litted in the disclosure, or where the matant cyclin but not to ICR as litted in the disclosure, or where the matant bind to CDRs but not o cyclin as litted in the disclosure; and ask condition changes of the Seguences of 294 action crids cach (200 DINGs).

CC cally a mucleic acid moternal endough a homologue, derivative or active fragment of a CDR matant of SEQ ID NOS; 911, where the homologue of interior changes or at least one of the 3 amino acid position changes or at least one of the 3 amino acid position changes or at least one of the 3 amino acid comprising at least one of the 5 expected by a secretary and a CDR matant encodes an amino acid comprising at least one of the 7 amino acid position changes or at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 8 amino acid comprising at least one of the 8 amino acid comprising at least one of the 9 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at least one of the 7 amino acid comprising at l corresponding wild type plants; transgenic plant having improved growth characteristics, e.g. increased yield, increased growth rate, or modified architecture, the plant has increased expression of a B-type CDK nucleic acid and/or increased activity and/or levels in a plant of a B-type CDK growth characteristics are improved relative to growth characteristics of

> 밁 S 밁

CC improved relative to growth characteristics of corresponding wild type CC plants, comprises introducing into a plant or a plant cell a B-type CDK CC gene/nucleic, or a nucleic acid encoding a CDK mutant comprising at least CC one of the 7 amino acid position changes listed in the disclosure, and CC mature plant growth. Identifying mutant plant CDKs having enhanced CDK CC activity relative to corresponding non-mutated plant CDKs comprises CC providing plant-derived CDK mutants, identifying cyclin dependent kinase CC inhibitor (ICK) non reacting mutants, identifying mutants having cyclin-binding activity, and optionally a yeast comprises but are capable of binding to plant ICKs, comprises providing plant-derived CC Mattants identifying substantially non-active plant CDKs, but are capable of binding to plant ICKs, comprises providing plant-derived CC identifying non-cyclin binding mutants. The CDK mutants are provided by providing a wild type plant CDK and mutating the CDK at least 1 amino CC acid position. Preferred Transgenic Plant: The plant is a comprised to improving the growth characteristics of a plant, the growth CC carchitecture (Claimad)

This gene can be used to produce plant tissue and/or morphologically normal fertile whole plants which are tolerant or resistant to glyphosate herbicide, and in the production of a herbicidal target for the high throughput in vitro screening of potential herbicides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
The invention relates to rice 5-enolpyruvylshikimate phosphate synthase (EBPSPS) genomic DNA (AAC87188). The invention also relates to an expression cassette comprising, in the 5'-3' direction, one or more transcriptional enhancer elements selected from AAC87190-C87196), the rice BPSPS promoter, genomic DNA encoding a rice EBPSPS chloroplast transit peptide, genomic DNA encoding a rice EBPSPS chloroplast to glyphosate (AAC87189), and a transcriptional terminator. The glyphosate resistant EBPSPS contains a region (AAB29793) containing two amino acid substitutions relative to the corresponding wild-type region (AAB29792). The invention also encompasses plant genomic EBPSPS sequences identified via screening with a rice EBPSPS intronic sequence; vectors and host plant cells comprising a nucleic acid sequence of the invention; transgenic plants (and tissues and seeds thereof) comprising a nucleic acid sequence of the invention, optionally further transformed with a DNA encoding an insect, fungal, viral, bacterial,

nematode, stress or herbicide resistance protein; and methods of producing the transgenic plants of the invention. The nucleic acids and constructs of the invention are used to produce a wide variety of morphologically normal, glyphosate resistant plants. The glyphosate resistant plants produced are particularly maize, soybean, cotton, sugarbeet and canola, but also other field crops, fruits and vegetables, turf and forage grasses and nut-producing plants. The plants are optionally resistant to insects, fungi, viruses, bacteria, nematodes, stress, desiccation and/or other herbicides. They can be used in the production of a herbicidal target for the high throughput in vitro screening of potential herbicides. The present sequence represents an enhancer element which may be used in the rice EPSPS expression cassette

                                                                                                                                                                  characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered amino acid metabolism, altered ester metabolism, altered glyceride metabolism, altered phenolic metabolism, altered carbohydrate metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or heavy the sterol of the invention may be used to provide disease resistance in a plant and gene abuffling or sexual PCR procedures. The present nucleic acid represents a plant and gene but is the invention may be used to provide disease resistance in a plant and gene abuffling or sexual PCR procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                             Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and sterols.
                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID NO 2760; 2576pp; English

                                                                                                                                                                                                     nucleic acid molecules that confer altered visual phenotypes in plants. Specifically, it refers to modifications of plant architecture and/or leaf surface features in plants, such as chlorotic, bleaching, etching, wet leaf, stunting, elongation and texture phenotypes, which are thought will be agronomic traits beneficial to the farmer. As such, these novel phenotypes can affect growth regulation i.e. useful for creating dwarf varieties, exhibit resistance to insects or heat stress, confer changes in pigment content such that plants have enhanced vitamin production or delayed senescence and also for example produce plants that control the production of ethylene. Furthermore, the present invention comprises generating transgenic plants, as well as reproducibly altering the visual phenotype of plant seeds, plant tissues and plant cells containing the polynucleotides described herein. This polynucleotide is a homologue of a bus as expressed in altered visual phenotype when expressed in
                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid derived from Nicotiana benthamiana, Oryzae sativa, Saccharomyces cerevisiae, and Papaver rhoeas, useful for conferring altered visual phenotypes in plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Crosley R,

The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered amino acid metabolism, altered ester metabolism, altered phenolic metabolism, altered carbohydrate metabolism, altered phenolic metabolism, altered terred carbohydrate metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or the proportion may be used to provide disease resistance in a plant and gene invention may be used to provide disease resistance in a plant and gene shuffling or sexual PCR procedures. The present nucleic acid represents a

                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to the identification and isolation of novel nucleic acid molecules that confer altered visual phenotypes in plants. Specifically, it refers to modifications of plant architecture and/ or cleaf surface features in plants, such as chlorotic, bleaching, etching, ct will be agronomic traits beneficial to the farmer. As such, these novel phenotypes can affect growth regulation i.e. useful for creating dwarf varieties, exhibit resistance to insects or heat stress, confer changes in pigment content such that plants have enhanced vitamin production or delayed senescence and also for example produce plants that control the production of ethylene. Furthermore, the present invention comprises generating transgenic plants, as well as reproducibly altering the visual phenotype of plant seeds, plant tissues and plant cells containing the collants, the method of the invention.
                                                                                                                                                                                                                                  Best Loc

The invention relates to plant nucleotide sequences that direct seed. CC leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential CC or constitutive transcription of an operatively linked nucleic acid CC segment. The invention also relates to a method for augmenting a plant CC genome and a method of identifying a gene, where its expression is CC altered in the seed, leaf, stem, panicle, pollen, root or is constitutive in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower, CC canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley, CC sorghum, rice or wheat. The polynucleotides and the polypeptides they cencode are useful for manipulating crop plants to alter or improve CC phenotypic characteristics, to produce large quantities of oil or CC incur stress tolerance (e.g. salt, cold or drought) to ensure the plants concerns to alter or incur tress tolerance (e.g. salt, cold or drought) to ensure the plants can't glowering or altered metabolic pathways. This sequence or dwarfism, CC early flowering or altered metabolic pathways. This sequence data for this compart of the printed specification but was obtained in CC electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Budworth

                                                                                                                                                                                                                The present invention relates to a glyphosate resistant rice 5-enolpyruvylshikimate phosphate synthase (EPSPS) gene. This gene can used to produce plant tissue and/or morphologically normal fertile verblants which are tolerant or resistant to glyphosate herbicide, and the production of a herbicidal target for the high throughput in vit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Glyphosate; 5-enolpyruvylshikimate phosphate synthase; EPSPS; herbicide resistance; ss.

                    CC (EPSPS) genomic DNA (AAC87188). The invention also relates to an CC expression cassette comprising, in the 5'-3' direction, one or more CC transcriptional enhancer elements selected from AAC87196-C87196), the CC rice EPSPS promoter, genomic DNA encoding a Tice EPSPS chropolast (CC transit peptide, genomic DNA encoding a EPSPS protein modified such that CC it is resistant to glyphosate (AAC87189), and a transcriptional CC terminator. The glyphosate resistant EPSPS contains a region (AAB29793) CC containing two amino acid substitutions relative to the corresponding CC wild-type region (AAB29792). The invention also encompasses plant genomic EPSPS sequence; vectors and host plant series comprising a nucleic acid sequence of the invention; transgenic plants (and tissues and seeds thereof) CC comprising a nucleic acid sequence of the invention, optionally further CC transformed with a DNA encoding an insect, fungal, viral, bacterial, nematode, stress or harbicide resistant plants. The plyphosate constructs of the invention are used to produce a wide variety of CC morphologically normal, glyphosate resistant plants. The glyphosate constructs of the invention are used to produce a wide variety of CC stress, desiccation and/or other herbicides. They can be used in the CC production of a harbicidal target for the high throughput in vitro exceening of potential herbicides. The present sequence represents a PCR or mean used in the present sequence of the invention of the present sequence represents a PCR or mean used in the present sequence of the invention of the present sequence represents a PCR or mean used in the present sequence represents a PCR or mean used in the present sequence represents a PCR or mean used in the present sequence represents a PCR or mean used in the present sequence represents a PCR or mean used in the present sequence represents a PCR or mean used in the present sequence represents a PCR or mean used in the present sequence represents a PCR or mean used in the present sequence represents a P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Oryza sativa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-JUL-1999;

                                                                                                                                                                                           macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                       The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as treatment, neovascular glaucoma and manufactures and reinopathy, neovascular glaucoma and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nucleic acid comprising diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antiarteriosclerotic; antianaemic; cytostatic; nootropic; neuroprotective; anti-HIV; anticonvulsant; ophthalmolgical; antirheumatic; antiarthritic; antidiabetic; antipaporiatic; antiarthritic; antidiabetic; antiosclerosis; anaemia; antiinflammatory; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy;
